

Mayur Hase

AWS Data Engineer | Cognizant Technology Solutions

Pune, Maharashtra | Phone: +91 8055464465 | Email: mayurhase07@gmail.com |  [mayur-hase](#)

Professional Summary: Data Engineer with ~4 years of experience building and supporting cloud-based data platforms, with hands-on exposure to AWS data services. Skilled in developing ETL pipelines using AWS Glue, PySpark, and SQL, and working with Amazon S3 and Redshift for data storage and analytics. Experienced in handling large datasets, optimizing data workflows, and implementing data modeling techniques for reporting

Technical Skills:

- **Languages & Processing:** Python (PySpark, Pandas), SQL
- **Big Data & ETL:** Apache Spark, AWS Glue, ETL/ELT pipelines, Data Transformation
- **AWS Services:** Amazon S3, AWS Glue, Amazon Redshift, EC2, IAM, VPC, Lambda, CloudWatch
- **Data Engineering Concepts:** Data Modeling (Star Schema), Incremental Loads, SCD Type 1 & 2, Data Quality Checks, Partitioning
- **Orchestration & Workflow:** AWS Glue Workflows, Event-driven pipelines
- **Databases:** MySQL, PostgreSQL
- **DevOps & Tools:** Git, GitHub, CI/CD basics, Linux, Shell scripting
- **Practices:** Agile/Scrum, Monitoring & Logging

Experience:

Data Engineer | Cognizant Technology Solutions | August 2022 – Present

- Developed ETL pipelines using AWS Glue (PySpark) to ingest structured data from relational databases and flat files into Amazon S3 data lake, processing datasets of large records.
- Transformed raw data into optimized formats (Parquet) and implemented partitioning strategies in S3 to improve query performance and reduce processing time.
- Loaded curated datasets into Amazon Redshift for analytics and reporting, supporting downstream business intelligence use cases.
- Implemented incremental data loading logic and handled basic change data capture scenarios using PySpark transformations.
- Optimized SQL queries and Spark jobs, reducing execution time by ~25% through join optimization and efficient data processing techniques.
- Automated recurring data workflows and operational tasks using Python and shell scripting, reducing manual effort by ~40%.
- Monitored ETL jobs and AWS infrastructure using CloudWatch, identifying failures and ensuring reliable pipeline execution.
- Managed access control and security using IAM roles, policies, and VPC configurations for secure data operations.

Projects:

Utility Data Platform | TXNM Energy & TEP (Electricity Utility Client) –

- Built a centralized data platform integrating customer, billing, and energy consumption datasets for analytics use cases.
- Designed ETL pipelines using **AWS Glue and PySpark** to ingest and transform data into an S3-based data lake.
- Performed data cleansing, validation, and transformation to ensure consistency and data quality.
- Modeled data into fact and dimension tables to support reporting and analytical queries.
- Enabled structured data access for periodic and ad-hoc reporting using Redshift-based analytics.

Certifications:

- AWS Certified Developer – Associate (2025)

Education:

- Master of Computer Application (MCA) – CGPA 8.11 (2023)
- Bachelor of Computer Science (BCS) – 74% (2021)
